# 1. Executive summary

Contracts for deed are a form of seller financing, where the seller retains legal title of a home until the borrower completes the payments.<sup>1</sup> Contracts for deed are also known by other names, sometimes including “land contracts,” “installment land contracts,” “land sales contracts,” or “bonds for deed.”<sup>2</sup> During the contract term, the borrower typically assumes the responsibilities of homeownership, including repairs, property taxes, and improvements. The contracts usually provide for forfeiture in event of any default in the contract terms, such as missed payments. Upon forfeiture, the seller may repossess the home and retain all accumulated equity and payments, including the buyer’s downpayment and improvements made to the property. Buyers’ exercise of their rights regarding the property is often complicated because the contract showing the buyer’s interest is not recorded. Key findings of this report follow:

- **Substandard housing, title defects, and inflated prices can create problems for homebuyers.** While some contracts for deed can provide sustainable paths to homeownership, seller-financiers often do not assess the borrower’s ability to repay the loan. Many contracts for deed include inflated home prices and higher interest rates than mainstream mortgages. Some also have large balloon payments at the end of the term. Substandard housing conditions can require expensive repairs and improvements paid for by the borrower and can severely impact the quality of life for borrowers and the surrounding community. Title defects can limit the borrower’s ability to assume legal title to the home or to later sell it and can result in the borrower losing all equity in the home. Because forfeiture provisions allow lenders to reclaim the home and retain the borrower’s payments and the value of any repairs, sellers or investors can profit from borrowers’ inability to sustain homeownership under contracts for deed.

---

<sup>1</sup> See Restatement (Third) Property (Mortgages) § 3.4(a) (Am. L. Inst. 1997) (“A contract for deed is a contract for the purchase and sale of real estate under which the purchaser acquires the immediate right to possession of the real estate and the vendor defers delivery of a deed until a later time to secure all or part of the purchase price”). On August 13, 2024, the CFPB released its Advisory Opinion on the Truth in Lending Act as it relates to Contracts for Deed. See CFPB Advisory Opinion: Truth in Lending (Regulation Z); Consumer Protections for Home Sales Financed Under Contracts for Deed.

<sup>2</sup> Restatement (Third) Property (Mortgages) § 3.4 cmt. a (Am. L. Inst. 1997); Amy Fontinelle & Rachel Witkowski, *Land Contract: What It Is & How It Works*, Forbes Advisor (Sep. 27, 2021), <https://www.forbes.com/advisor/mortgages/what-is-a-land-contract/>. Despite the various names, and differences in the specific operation of these agreements, their core characteristics are the same. In this paper we use “contracts for deed” to refer to all such agreements.

- **Contract for deed loans were long marketed to Black borrowers.** From the 1930s well into the 1960s, when Black borrowers were largely barred from obtaining more affordable loans insured by the Federal Housing Administration (FHA), sellers marketed contracts for deed to Black borrowers to purchase homes at inflated prices. Contract for deed loans continue to be marketed to traditionally underserved and underinvested communities.
- **Driven by investors, contract for deed loans surged during the Great Recession.** Over 7.5 million homes were lost to foreclosure between 2007 and 2016.<sup>3</sup> Investors purchased foreclosed homes in bulk at low prices. Investors then resold and financed many of these homes through contracts for deed. Some investors sold the same home back to the same family who had previously lost it through foreclosure, albeit at a much higher price than either the owner or the investor had paid to acquire the home.
- **Today, contract for deed loans are disproportionately concentrated in low-income, Black, Hispanic, immigrant, and some religious communities.** These include many of the same communities that were redlined and experienced disproportional foreclosures during the Great Recession. Contract for deed providers have also targeted Muslim borrowers with claims that their product complies with certain religious practices forbidding the paying of interest.
- **Contracts for deed can harm housing markets by causing or perpetuating substandard housing stock, inflated home prices, and less access to mainstream mortgage credit.** They create and perpetuate substandard housing stock, as sellers can generate profit by repeatedly selling homes without maintaining them, also known as churning. They can also perpetuate a lack of mainstream mortgage lending in underserved and underinvested communities if the seller only makes the properties available for sale using a contract for deed and will not accept a sale financed with a bank loan. Additionally, the lack of appraisals and inspections permits sales prices at inflated values.

Several federal laws under the CFPB’s jurisdiction provide consumer protections that may apply to practices associated with contracts for deed, including the Consumer Financial Protection Act’s prohibition against unfair, deceptive, and abusive acts and practices, the Fair Credit

<sup>3</sup> CoreLogic, *United States Residential Foreclosure Crisis: Ten Years Later*, 3 (March 2017), <https://www.corelogic.com/wp-content/uploads/sites/4/2021/07/National-Foreclosure-Report-Ten-Years-Later.pdf>.

Reporting Act, the Truth in Lending Act, the Interstate Land Sales Full Disclosure Act, and the Equal Credit Opportunity Act. Many of these laws also have private rights of action, which allow individuals to sue on their own behalf. State attorneys general also have authority to enforce these laws, as well as state and local laws that may provide additional protections to borrowers. The federal Fair Housing Act provides additional protections, including a private right of action.

## 2. Consumer harms associated with contracts for deed

Contracts for deed are loans where the seller retains legal title of a home until the borrower completes the course of payments. Their payback period may vary from a few years to twenty years or more. While some contracts for deed can provide sustainable paths to homeownership,<sup>4</sup> they often pose substantial risks. During the contract term, the borrower assumes the financial responsibilities of homeownership, including property taxes, hazard insurance, repairs, and improvements. However, contracts for deed can lack many of the consumer protections available with mainstream mortgages and may be structured in a manner that exposes borrowers to harm over the entire life cycle of the agreement.<sup>5</sup>

Tables 1A-D below highlight some common mainstream mortgage protections for borrowers and identify those features that are often not present in contracts for deed based on common market practices. The tables are designed to broadly highlight some of the potential harms consumers may face when entering into a contract for deed, without addressing all the variations in market practices and state and local legal requirements. Some of the market practices in these tables are

---

<sup>4</sup> See The Pew Charitable Trusts, *Land Contracts Pose 5 Major Risks for Homebuyers*, July 18, 2024, <https://www.pewtrusts.org/en/research-and-analysis/issue-briefs/2024/07/land-contracts-pose-5-major-risks-for-homebuyers> (“87% of respondents to Pew’s survey who had either left or repaid a land contract rated their experience as somewhat or extremely positive, 88% said that they eventually achieved homeownership, and about 56% reported that they still own their land contract-financed property”).

<sup>5</sup> Heather K. Way & Lucy Wood, *Contracts for Deed: Chartering Risks and New Paths for Advocacy*, 23 J. Affordable Housing & Cmty. Dev. L. 37, 40 (2014) (contract for deed “transactions lack many of the safeguards available to buyers in traditional third-party mortgages —with weaker legal protections and no bank, government agency, or title closing agent overseeing the transaction. As a result, homebuyers utilizing seller financing are prime targets for a host of abusive practices by unscrupulous sellers.”).

not compliant with existing legal requirements under state or federal law.<sup>6</sup> Some contracts for deed are compliant with the law, and not all contracts for deed have all of these features.<sup>7</sup>

---

<sup>6</sup> For example, the Truth in Lending Act requires covered creditors to disclose the finance charge on any loan. Contracts for deed generally have a finance charge, often including interest, but the finance charge may not be disclosed to borrowers. In some cases, creditors will assert there is no interest for the product, but will make other adjustments to the contract terms, including raising the sales price, in an amount equal to imputed interest. In that case, the finance charge is actively concealed from the borrower, in violation of the Truth in Lending Act. Contracts for deed sold by TILA creditors are covered by federal TILA disclosure requirements. *See* CFPB Advisory Opinion, *supra* note 1.

<sup>7</sup> For example, after default, mainstream mortgages must follow certain state and local law procedures (arbitration, mediation, required filings and notice, recordings, etc.) before a creditor can complete foreclosure. These procedures, and the extent to which contracts for deed are included in those protections, vary extensively by state.

**TABLE 1A: PROPERTY UNDERWRITING PROCESSES**

Property underwriting process features protect both borrowers and creditors. They ensure that properties are worth the purchase price and that they are legally free to be sold to the borrower.

Typical Features in Loan Products to Purchase Homes	Mainstream Mortgages	Contracts for Deed
Appraisals performed	Yes	No
Home inspection performed	Yes	No
Title Search Performed	Yes	No

**TABLE 1B: LOAN DISCLOSURES**

Certain features allow borrowers the ability to shop around and compare multiple loan offers to ensure they receive the best interest rate and fees for their loan.

Typical Features in Loan Products to Purchase Homes	Mainstream Mortgages	Contracts for Deed
Interest rate disclosed	Yes	Varies
Disclosures provided	Yes	No

**TABLE 1C: OWNERSHIP FEATURES**

Ownership features ensure borrowers retain title to the home during the loan term. They also enable borrowers to pursue sale of the home, take out home equity loans to make repairs, and refinance the home loan during the loan term if needed.

Typical Features in Loan Products to Purchase Homes	Mainstream Mortgages	Contracts for Deed
Legal title transferred upon entering into contractual agreement	Yes	No
Borrower may sell home, obtain secondary liens, or refinance during the loan term	Yes	No

**TABLE 1D: DEFAULT PROCESS FEATURES**

Loss of property occurs only after legal foreclosure procedures.

Typical Features in Loan Products to Purchase Homes	Mainstream Mortgages	Contracts for Deed
Pre-foreclosure review periods (e.g., Federal 120-day pre-foreclosure review period)	Yes	No
Foreclosure procedures occur before property may be seized	Yes	No
Borrower entitled to receive any surplus from foreclosure sale of home	Yes	No

*Avoiding Obligations to Provide Habitable Properties:* A contract for deed transaction may provide a seller with an opportunity to avoid repair obligations that ordinarily extend to a landlord.<sup>8</sup> A seller can place a contract for deed borrower in a substandard home, without the benefit of the inspection associated with mainstream mortgage financing that identifies defects in the home and usually results in the home being brought up to code.<sup>9</sup> Borrowers sometimes enter into contracts for deed only to find out after the fact that expensive repairs are necessary to make the home habitable.<sup>10</sup>

*Lack of Competition in Home Pricing:* Some contract for deed sellers target low-income borrowers with offers of affordable homes.<sup>11</sup> Yet, the contract prices can exceed the true value of the home and may not reflect the costs of needed repairs or unpaid back taxes or other existing liens on the properties.<sup>12</sup> Borrowers may agree to the contract prices without knowing the true value of the homes, given that appraisals are not required for the transactions.<sup>13</sup> Where sellers control a significant portion of the housing stock within an area, or represent themselves as the sole provider of financing, they are able to inflate home prices more easily.

*Lack of Competition in Loan Pricing:* Contract for deed sellers may present themselves as the sole financing option for the homes and thus may not have to compete on loan pricing, which could limit consumer choice.<sup>14</sup> Accordingly, they may charge rates above the prevailing

---

<sup>8</sup> See Eric T. Freyfogle, *The Installment Land Contract as Lease: Habitability Protections and the Low-Income Purchaser*, 62 N.Y.U. L. Rev. 293, 296 (1987) (“As sellers rather than landlords, they can shift repair duties to the home residents and can profit from substandard housing—all in contravention of the public policies underlying the warranty of habitability”).

<sup>9</sup> See, e.g., Installment Sales Cont. Act, 765 Ill. Comp. Stat. 67/10(c)(20), (26) (sellers may make borrowers financially responsible for certain repairs, even for homes with known defects, including condemned dwellings, as long as the defects are disclosed).

<sup>10</sup> Matthew Goldstein & Alexandra Stevenson, *Market for Fixer-Uppers Traps Low-Income Buyers*, N.Y. Times (Feb. 20, 2016), <https://www.nytimes.com/2016/02/21/business/dealbook/market-for-fixer-uppers-traps-low-income-buyers.html>; Jeffrey Meitrodt, *Contract for Deed can be House of Horror for Buyers*, Star Tribune (July 5, 2013), <https://www.startribune.com/jan-14-contract-for-deed-can-be-house-of-horror-for-buyers/185756982/>; Fair Housing Center of Central Indiana (FHCCI), *The State of Fair Housing in Indiana Report - Land Contracts: The Promise and Perils of Alternative Home Financing* 9 (June 30, 2024) (a contract for deed borrower may unknowingly have to spend money at the beginning of the contract to bring their home into a livable condition, which could limit their ability to make monthly payments and put them at risk of default).

<sup>11</sup> Jeremiah Battle, Jr., Sarah Mancini, Margot Saunders, & Odette Williamson, *Toxic Transactions: How Land Installment Contracts Once Again Threaten Communities of Color*, Nat’l Consumer Law Ctr. 4-5 (July 2016), <https://www.nclc.org/wp-content/uploads/2022/09/report-land-contracts.pdf>.

<sup>14</sup> See, e.g., David Migoya, *Denied loan at bank, buyers have few options: Many applicants not ‘credit-worthy,’* Belleville News-Democrat (Illinois) (May 18, 1993), at 1A.

mortgage rate.<sup>15</sup> In addition, some contracts for deed are not fully amortized and require the borrower to pay a substantial balloon payment at the end of the payment schedule or risk losing the property and all accumulated equity.<sup>16</sup> In one example from 1993 of a loan from East St. Louis, Illinois, in 1993, that was not fully amortizing, the principal balance increased to \$106,320 on a \$19,037 home.<sup>17</sup>

*Sellers Have Incentive to Repeatedly Sell the Same Home using a Contract for Deed:* Many contracts for deed permit sellers to evict borrowers for any default, including a single missed payment or lapse of insurance.<sup>18</sup> Under the contract terms, sellers are generally entitled to retain all payments made by the borrower and any improvements the borrower has made to the home.<sup>19</sup> As a result, borrowers can lose all of their accumulated equity if they miss or are late on a single payment. In contrast, lenders of most mainstream mortgages must wait 120 days after the first missed payment before beginning the foreclosure process,<sup>20</sup> which can allow time for the borrower to catch up, refinance the loan, sell the house, or obtain a loan modification or other accommodation from the lender.

<sup>17</sup> Editorial, *Breaking the Cycle*, Belleville News-Democrat (Illinois) (May 19, 1993), at 4A.

<sup>18</sup> See, e.g., *Perdue v. Jamison*, No. 28324, 2019 WL 5856669, at \*1, \*6-10, (Ohio Ct. App. Nov. 8, 2019) (finding that a land contract borrower had forfeited her rights under a land contract per Ohio law when the borrower failed to pay real estate taxes and obtain general liability insurance pursuant to the terms of the land contract that stated “[i]n the event of default and termination of [the land contract] . . . , the [borrower] forfeits any and all payments made under the terms of [the land contract], including but not limited to all payments made towards the [p]urchase [p]rice, and any and all taxes, assessments, or insurance premiums paid by the [borrower]”).

<sup>19</sup> See, e.g., Nat'l Consumer Law Ctr., *Summary of State Land Contract Statutes*, 6 (Apr. 30, 2021) (“forfeiture allows a seller to cancel the contract based on any default, even a trivial one, simply by notifying the consumer that it is canceled, and then commence an eviction proceeding. The seller is permitted to keep the home, whatever its value, and keep all the money the consumer has paid ... In some states, including many that have enacted land contract statutes, courts have allowed virtually unrestricted use of forfeiture clauses.”), <https://www.pewtrusts.org/-/media/assets/2022/02/summary-of-state-land-contract-statutes.pdf>; N.C. Gen. Statute §§ 47H-3, 47H-4 (contract for deed forfeiture provisions are executed after notifying the borrower and providing at least 30 days to cure); Wash. Rev. Code §§ 61.30.010, 61.30.020, 61.30.030, 61.30.090 (contract forfeiture provisions are executed by the seller after providing and recording required notices).

<sup>20</sup> 12 CFR § 1024.41(f)(1).

*High Failure Rate:* Some experts estimate that more than 50% of contracts for deed result in loss of the home.<sup>21</sup> Researchers at the University of Texas-Austin found over a 21-year period that 45% of contract for deed borrowers in the Texas border colonias<sup>22</sup> defaulted and fewer than 20% obtained a deed to their home.<sup>23</sup> The Pennsylvania Attorney General found that over a six-year period, 79% of one seller's contract for deed loans failed within a few years.<sup>24</sup> In contrast, during the Great Recession, the national foreclosure rate was 4.6%, including a rate of 15.6% among subprime loans.<sup>25</sup> Today, the overall foreclosure rate stands at approximately 0.3%.<sup>26</sup>

*Lack of Protections Upon Default:* In general, some contracts for deed permit sellers to evict borrowers, subject only to a minimal process under state law. And unlike mainstream mortgages, contracts for deed may not provide a foreclosure process or other traditional protections normally available to borrowers,<sup>27</sup> such as the right to a foreclosure sale and receipt of any surplus funds generated by the sale.<sup>28</sup> In Detroit, researchers found that 31 % of properties held within certain large portfolios of contracts for deed were subject to landlord

<sup>24</sup> Complaint, *Pennsylvania v. Vision Prop. Mgmt., LLC*, No. GD-19-014368, at ¶ 76 (Ct. Common Pleas Allegheny Cnty, Pa. Oct. 10, 2019) (within a six year period approximately 85% of Vision Property Management, LLC and its affiliates contracts for deed were terminated with only approximately 6% of the terminations due to the borrower owning the home in question).

<sup>25</sup> *See* U.S. Census Bureau 2012, Table 1193: Mortgage Originations and Delinquency and Foreclosure Rates: 1990 to 2009, <https://www2.census.gov/library/publications/2010/compendia/statab/130ed/tables/11s1193.pdf>.

<sup>26</sup> *See, e.g.,* CoreLogic: *US Mortgage Delinquency, Foreclosures Rates Hover Near Historic Lows in February* (Apr. 25, 2024) (calculating the share of mortgages in some stage of the foreclosure process as 0.3% in February 2024, unchanged from February 2023), <https://www.corelogic.com/press-releases/corelogic-mortgage-delinquency-foreclosures-hover-near-historic-lows-february/>.

<sup>27</sup> Battle, *et al.*, *supra* note 11, at 3 (land installment contracts are popular with investors because they can quickly evict defaulting borrowers without having to address mainstream mortgage foreclosure protections for defaulting borrowers).

<sup>28</sup> Restatement (Third) Property (Mortgages) § 3.4, cmt. b(1) (Am. L. Inst. 1997) (many states provide mainstream mortgage holders a right of redemption, which gives the defaulting borrower the ability to redeem his property); Heather K. Way, *Informal Homeownership in the United States and the Law*, 29(1) *St. Louis U. Pub. L. Rev.* 113, 139-40 (2009).

actions—the means by which contract for deed occupants are evicted.<sup>29</sup> The CFPB has received reports that borrowers can be intimidated by seller notices of default and functionally self-evict by abandoning their homes, leaving behind their downpayment and investments in improvements to the home.

*Undisclosed Title Defects Can Hinder Assumption of Legal Ownership:* A title search may not be performed for contract for deed transactions, meaning that the home may have preexisting title defects unknown to the borrower.<sup>30</sup> The borrower may also be unaware of any liens imposed on the property during the course of the contract.<sup>31</sup> Thus, it can be difficult for borrowers to eventually obtain legal title to the home, even if they are able to make all of the payments due under the contract for deed.

In addition to these consumer harms, contracts for deed can harm an entire community. High default rates reduce the home values of surrounding homes, increase the insurance rates, and create safety and public health risks from empty or dilapidated homes. Contracts for deed can harm a community by financing the repeated flipping of perpetually substandard housing stock. The prevalence of contract for deed sellers in low-income communities concentrates such harms on these communities.

<sup>30</sup> See Grant S. Nelson, *The Contract for Deed as a Mortgage: The Case for the Restatement Approach*, 1998 B.Y.U. L. Rev. 1111, 1143 (1998) (“Because there is normally no third party lender to insist on a title examination, the vendor has no incentive to have his or her own title examined.”); Battle, *supra* note 11, at 8 (“Title problems are extremely common in land contract transactions. Advocates report that contract sellers often fail to disclose liens and mortgages that exist at the time the contract is entered into.”); FHCCI, *supra* note 10, at 10 (“However, a simple warranty of title from the seller does not provide the buyer with the same protections that they would have under a traditional mortgage, where the lender would require the buyer to purchase title insurance. Title insurance provides a thorough check for contesting title claims, which allows the buyer to back out of the sale if it turns out that, for example, a previous owner left a lien on the property or had a disputed will. After the sale, title insurance also insures the buyer (and the mortgage lender) from any financial losses that come from a contested title.”).

<sup>31</sup> See Way, *supra* note 28, at 138 (“Because so many installment contracts are never recorded, informal buyers are particularly vulnerable to title defects arising after the transaction is initiated.”); David Migoya, *Buyers Pay Taxes Twice or Risk Losing Homes*, *Belleville News-Democrat* (Illinois) (May 17, 1993), at 1A.

# 3. The history of predatory contracts for deed

From the 1930s through the 1960s, Black borrowers in the United States were largely excluded from the mainstream home-mortgage market due to discrimination. Maps produced by the government drew red lines around any neighborhood that was not majority white.<sup>32</sup> The practice of redlining was institutionalized by the Home Owners' Loan Corporation (HOLC).<sup>33</sup> Established in 1933 during the Great Depression to assist distressed homeowners, the HOLC developed a grading system to assess neighborhood risk across the United States.<sup>34</sup>

In 1934, Congress created the Federal Housing Administration (FHA), which insured private mortgages, causing a drop in interest rates and a decline in the size of the down payment required to purchase a house.<sup>35</sup> Building on the HOLC's rating system, the FHA developed its own guidance on race and real estate values. For example, the FHA Underwriting Manual recommended restrictive covenants as a method to maintain neighborhood stability via racial segregation.<sup>36</sup>

Driven by these federal housing policies, private lenders regularly refused loans to homebuyers in Black neighborhoods while underwriting the construction of homes by whites of a similar economic status a few blocks away.<sup>37</sup> Black borrowers were often left with contracts for deed as the only alternative to finance a home purchase. One study found that borrowers in contract for deed sales paid an average of 84 % more than the speculator's purchase price on the home and

<sup>37</sup> *Id.* at 208-209.

that “between 75 percent and 95 percent of the homes sold to black families [in Chicago] during the 1950s and 60s were sold on contract.”<sup>38</sup>

The combination of high housing prices and above-market interest rates meant that contract holders had to make large monthly payments to meet their debt obligations. If they defaulted, speculators evicted them and quickly offered the house to another Black borrower. The arrangement brought speculators a profit with relatively little risk.<sup>39</sup> A secondary market for installment contract paper provided liquidity to the market and provided sellers with capital to sustain the practice. Speculators and investors could recoup their entire investment within just two years.<sup>40</sup>

Since contracts for deed did not require appraisals or inspections, sellers sometimes sold dilapidated yet high-priced homes to Black borrowers. The absence of loss mitigation or workout options meant that when borrowers fell behind on their payments, they were evicted without foreclosure proceedings, losing all equity in their homes.<sup>41</sup> Even if borrowers successfully made payments over the full term of their contracts, they could lose everything at the end of the term due to balloon payments that borrowers could not finance.<sup>42</sup>

For a more detailed discussion of history related to predatory contracts for deed, see Appendix A.

## 4. Investors fueled a resurgence in contracts for deed

The 2008 subprime mortgage crisis and ensuing Great Recession led to a surge in contracts for deed.<sup>43</sup> Foreclosures rose during the crisis, tripling from 2006 to 2008.<sup>44</sup> By 2010, 4.6% of home mortgage loans were in foreclosure, with low-income and other underserved and underinvested communities hardest hit.<sup>45</sup> As borrowers defaulted on their loans, ownership of homes reverted to mortgage lenders, swelling their portfolios of real estate owned (REO) properties with concentrations of REO in communities experiencing rapid declines in property values. Fannie Mae and Freddie Mac (federal government-sponsored enterprises that buy and guarantee mortgages) responded to the rise in their REO assets by scaling up their disposition processes, selling these properties in bulk at a discount.<sup>46</sup> Investors began purchasing tens of thousands of these foreclosed homes. As a share of nationwide home sales, activity by these investors increased more than six times between 2004 and 2012.<sup>47</sup> Investment firm Harbour Portfolio

<sup>46</sup> See Goldstein & Stevenson, *supra* note 10.

<sup>47</sup> Business investors buying three or more homes accounted for almost 6.5% of home sales in 2012, up from less than 1% in 2004. Raven Molloy & Rebecca Zarutskie, *Business Investor Activity in the Single-Family-Housing Market*, Bd. of Governors of the Fed. Reserve Sys. FEDS Notes (Dec. 5, 2013), <https://www.federalreserve.gov/econresdata/notes/feds-notes/2013/business-investor-activity-in-the-single-family-housing-market-20131205.html>.

Advisors (Harbour), for example, bought 6,700 single-family homes in the aftermath of the 2008 economic collapse, spending an average of \$8,000 per home.<sup>48</sup>

Some investors were aware that many potential borrowers were struggling. Millions of consumers nationwide faced increased barriers to credit access with newly damaged credit records.<sup>49</sup> Aspiring homeowners blocked from the conventional mortgage market became targets for investment firms like Harbour and Shelter Growth Capital (run by the former head of Goldman Sachs mortgage department) that sought to profit from their newly acquired housing stock via contracts for deed.<sup>50</sup> At least some investors marketed to former homeowners who sought to regain their homes after losing them in foreclosure by selling their homes back to them on usurious terms, which included using contracts for deed in some cases.<sup>51</sup>

Researchers have documented the rise of contracts for deed in various parts of the country following the 2008 financial crisis. For the last year it was collected, American Housing Survey data indicated that 3.5 million owner-occupied households had a contract for deed in 2009, representing 4.6% of all owner-occupied households.<sup>52</sup> A study examining tax records in several

<sup>51</sup> See *e.g.*, *Hodges, et al., v. Swafford*, 863 N.E.2d 881, 883-892 (Ind. Ct. App. 2007) (Court found that lender violated the Truth in Lending Act (TILA) when the lender purchased the borrower's home who was facing impending foreclosure and subsequently resold the home back to the borrower via a land contract).

<sup>52</sup> Atlanta Fed Report, *supra* note 50, at 6. These numbers may be understated given the various terms used for contracts for deeds (i.e., land installment contracts), the challenge that borrowers may not understand that they do not have a mortgage when they completed the survey, and the high degree of overlap across populations that are undercounted in census data and are contract for deed borrowers. See *e.g.*, Battle, *et al.*, *supra* note 11, at 2 ("Reliable data about the prevalence of land contract sales is not readily available. According to the U.S. Census, 3.5 million people were buying a home through a land contract in 2009, the last year for which such data is available ... But this number likely understates the prevalence of land contracts, as many contract borrowers do not understand the nature of their transaction sufficiently to report it."); FHCCI *supra* note 10, at 5 (challenges in examining the use of land contracts include the lack of comprehensive public data on land contracts and the expectation of a high number of unrecorded land contracts).

major cities found that contracts for deed increased from 2008 to 2013.<sup>53</sup> A nationally representative survey conducted by Pew in 2021 showed that approximately 8 million Americans have used a contract for deed at some point, amounting to 5% of consumers who borrowed to buy a home.<sup>54</sup> About 15% of homeowners with contracts for deed were Black and 13% were Hispanic.<sup>55</sup> The post-Great Recession experiences of communities in Atlanta, Minneapolis, Detroit, and the Texas border colonias highlight the impact of contracts for deed on those communities.

## 4.1 Atlanta

Harbour purchased homes foreclosed during the 2008 mortgage collapse, including hundreds in Atlanta.<sup>56</sup> There, Harbour marketed the homes, often priced between \$40,000 and \$50,000, to low-income Atlanta borrowers using contracts for deed.<sup>57</sup>

In 2018, Atlanta Legal Aid sued Harbour on behalf of Black homebuyers claiming that it charged exorbitant interest rates, and forced borrowers to make needed repairs to the dilapidated properties that were uninsurable due to their defects.<sup>58</sup> Plaintiffs claimed that Harbour then evicted borrowers if they missed a payment or were not able to make needed repairs, forfeiting all money payments made to that point, including the value of any repairs the borrower had made.<sup>59</sup> As depicted in Figure 1 below, National Consumer Law Center research found that—despite Atlanta being only 32.1% Black—84% of Harbour Portfolio properties were located in

<sup>63</sup> *Id.*

contracts for deed in the area, they have experienced a resurgence. In 2021, more than 1,800 contracts for deed were signed in Minnesota’s 11 most populous counties, which included Minneapolis and St. Paul.<sup>64</sup>

Some contract for deed providers targeted Muslim borrowers, including particularly those in the Somali community. For Minnesota’s Somali community, which numbers around 80,000, homeownership may require compliance with religious law, which normally forbids both the charging and paying of interest. Some lenders have marketed contracts for deed to potential borrowers of Somali descent as way to purchase a home without a mortgage that carries interest—when the contracts actually contain hidden interest. Contracts for deed are advertised to the Somali community, in both English and Somali, with messages that include: “Buying a house in the States normally asks you to pay interest. Or to have a good credit score. But you don’t have to if you choose a contract-for-deed agreement.”<sup>65</sup> In May 2024, the Minnesota Attorney General filed suit against a group of companies, alleging that collectively they violated state and federal law by selling houses via predatory and illegal contracts for deed, used deceptive trade practices to market their contracts for deed, and discriminated by offering unfair terms to Muslim borrowers.<sup>66</sup> The Attorney General recently described contracts for deed as “a poor man’s mortgage that combine all the responsibilities of homeownership with all the disadvantages of renting, while offering the benefits of neither.”<sup>67</sup>

## 4.3 Detroit

In Detroit, one estimate found more contracts for deed were executed in 2015 than mainstream mortgages.<sup>68</sup> Based on their experience defending borrowers in eviction cases, advocates observed that contracts for deed often involved substandard housing conditions, including

homes lacking heating, hot water, and plumbing,<sup>69</sup> sometimes with an outstanding tax bill, all of which contributed to the occupants being unable to make the payments and losing their homes.<sup>70</sup> In one case, for example, a contract for deed borrower agreed to pay \$43,003 for the home with an 11% interest rate. The monthly payment was \$400 for principal and interest and \$170 for property taxes. The borrower was eventually evicted and lost all equity in the home, including approximately \$12,000 in payments.<sup>71</sup>

Other research has indicated a general lack of standard mortgage credit available for smaller loan amounts in the Detroit area where contracts for deed were often found, reflecting the impact of the failure of banks and savings associations to adequately serve low-income communities.<sup>72</sup>

## 4.4 Texas Border Colonias

Many landowners and developers in the colonias situated near the Texas-Mexico have offered property financing using contract for deed loans.<sup>73</sup> As noted above, contract for deed loans would not require the seller to provide proof of a clear title, ensure the presence of needed infrastructure, or guarantee that existing structures on the land meet county building codes.<sup>74</sup> Comparisons between Home Mortgage Disclosure Act (HMDA) data and Census Bureau American Community Survey (ACS) data demonstrate a low level of mainstream HMDA home purchase lending in the HMDA data for Texas counties where contracts for deed or other

There are seller-financing entities in Texas that offer contracting agreements that are not traditional contracts for deed but contain some of the same features of contracts for deed that result in harm to consumers.

<sup>74</sup> *Id.*

alternative financing arrangements exist.<sup>75</sup> The table below provides a comparison between HMDA reported home purchase mortgage originations (data that would exclude contracts for deed or other alternative financing arrangements) and ACS data on housing units with a mortgage, contract to purchase or similar debt in (1) Hidalgo County, Texas, the single county with the largest number of colonias in the country; (2) the group of six counties, all in Texas, with the highest concentration of colonias in the country;<sup>76</sup> (3) all of Texas; and (4) the entire country.

**TABLE 2:** ACS HOUSING UNITS WITH A MORTGAGE, CONTRACT FOR DEED, OR SIMILAR DEBT VS HMDA PURCHASE ORIGINATIONS, 2017/18 TO 2021/22

	<b>Hidalgo County</b>	<b>Colonias Counties</b>	<b>All Texas</b>	<b>National</b>
ACS Housing Units with a Mortgage, Contract for Deed, or Similar Debt	70,433	238,215	3,640,097	49,759,315
HMDA Purchase Originations (Mainstream Mortgage Only)	24,276	97,945	1,990,539	21,690,628
<b>Ratio (HMDA to ACS)</b>	<b>0.34</b>	<b>0.41</b>	<b>0.55</b>	<b>0.44</b>

Note that, due to data access considerations and a change in HMDA reporting thresholds, ACS data covers years 2017-2021, while HMDA data covers 2018-2022.

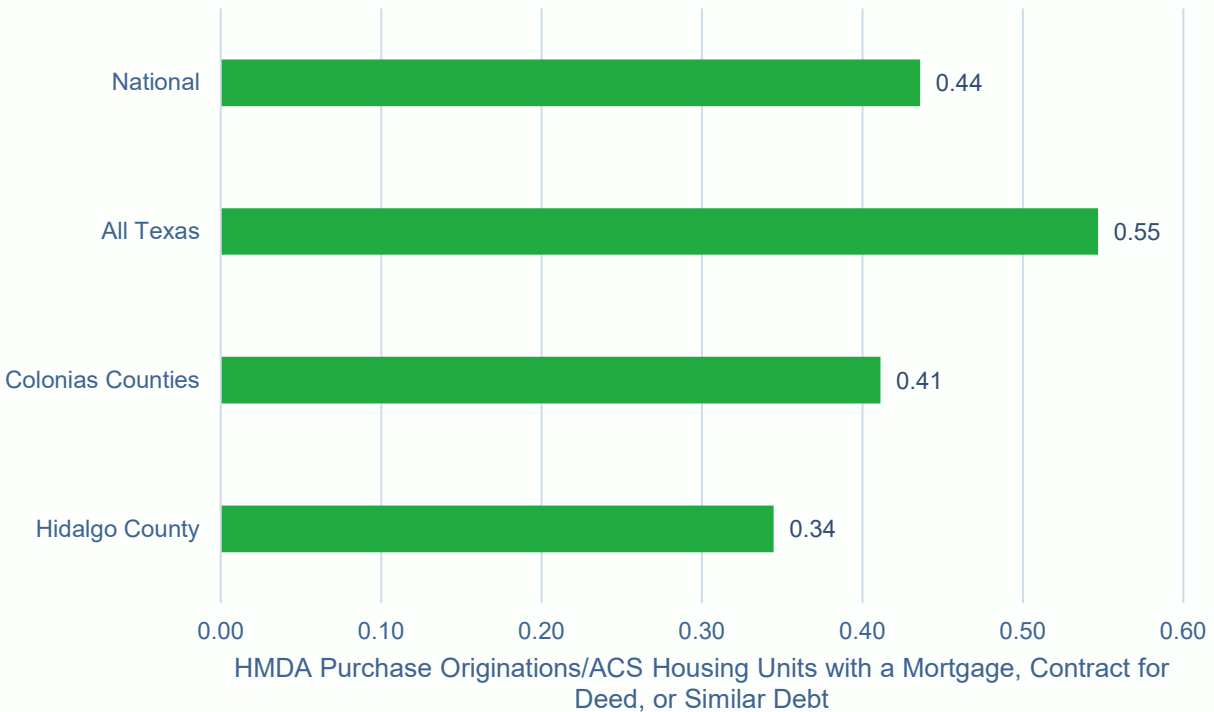

The graph below plots the same data for the six Texas counties with the highest number of colonias. The graph shows that, on average, these counties have relatively low rates of HMDA

<sup>75</sup> U.S. Census Bureau, American Community Survey, Table B25081: Mortgage Status (providing county-level statistics grouping together housing debt for the category “mortgage, contract to purchase, or similar debt”), available at US Census Bureau, Table B25081: Mortgage Status, <https://data.census.gov/table/ACSPT1Y2021.B25081>. While the HMDA data do not include contracts for deed, the ACS variable shown in the above table includes both mortgages and contracts for deed, so a low ratio means that there is a low level of HMDA purchase loans compared to the number of housing units with a mortgage or contract for deed.

<sup>76</sup> Dall. Fed Report, *supra* note 73, at 1.

home purchase mortgage lending activity per housing unit with a mortgage when compared to all of Texas and nationally.<sup>77</sup> These counties contain large Hispanic populations.<sup>78</sup>

**FIGURE 2:** RELATIONSHIP BETWEEN HMDA AND HOUSING DATA

<sup>77</sup> Research from the Housing Assistance Council shows a similar relationship for all mortgage lending and owner-occupied housing units. Housing Assistance Council, *Colonias Investment Areas: Working Toward a Better Understanding of Colonia Communities for Mortgage Access and Finance*, 30-33 (November 2022), <https://ruralhome.org/wp-content/uploads/2021/05/colonias-investment-areas-report.pdf>.

<sup>78</sup> See FHCCI, *supra* note 10, at 14 (targeting of Hispanic and immigrant communities with contracts for deed or other similar alternative financing arrangements occurs in other parts of the country such as Indiana: “some land contract companies hire Spanish-speaking staff to communicate with consumers. Using a Spanish-speaking intermediary is a key tool in building trust with Spanish-speaking consumers. These consumers may prefer to work with a real estate agent or employee that speaks their language, allowing them to feel comfortable and avoid miscommunication during translations. However, if the consumer does not receive an explanation of the transaction and a translation of the documents from an independent party, they become totally reliant on the word of the Spanish-speaking real estate agent or employee, who has a vested interest in persuading them to take part in the land contract.”).

# 5. Contract for deed sellers may exploit—and perpetuate—market distortions

Beyond the risks contracts for deed pose to individual borrowers, these loans may also exploit and perpetuate distortions in the housing market more broadly. Data on the prevalence of contracts for deed in underserved communities support an inference that the dearth of traditional sources of funding for home purchases creates market conditions that can drive borrowers to contracts for deed and other alternative funding arrangements.<sup>79</sup> At the same time, contract for deed sellers may exploit borrowers in underserved “credit deserts.” Indeed, just as contract for deed sellers did historically, some contract for deed sellers and investors today appear to target communities with low credit access. Research has found that contract for deed properties purchased by investors tend to be located in neighborhoods with fewer bank branches per capita than the surrounding metropolitan average.<sup>80</sup>

Lack of mainstream mortgage options can be particularly acute for lower-cost homes, where research suggests greater concentration of alternative financing, including contracts for deed. Research indicates that of “the single-family homes sold in 2015 in the United States, 14 percent, or 643,000 homes, sold for \$70,000 or less, of which slightly more than one-fourth were financed with a mainstream mortgage loan product.”<sup>81</sup> As depicted in Figure 3, below, researchers from the Harvard University Joint Center for Housing Studies found that in Wayne County, Michigan, few lower-priced home sales appear in HMDA data, which is an indication

---

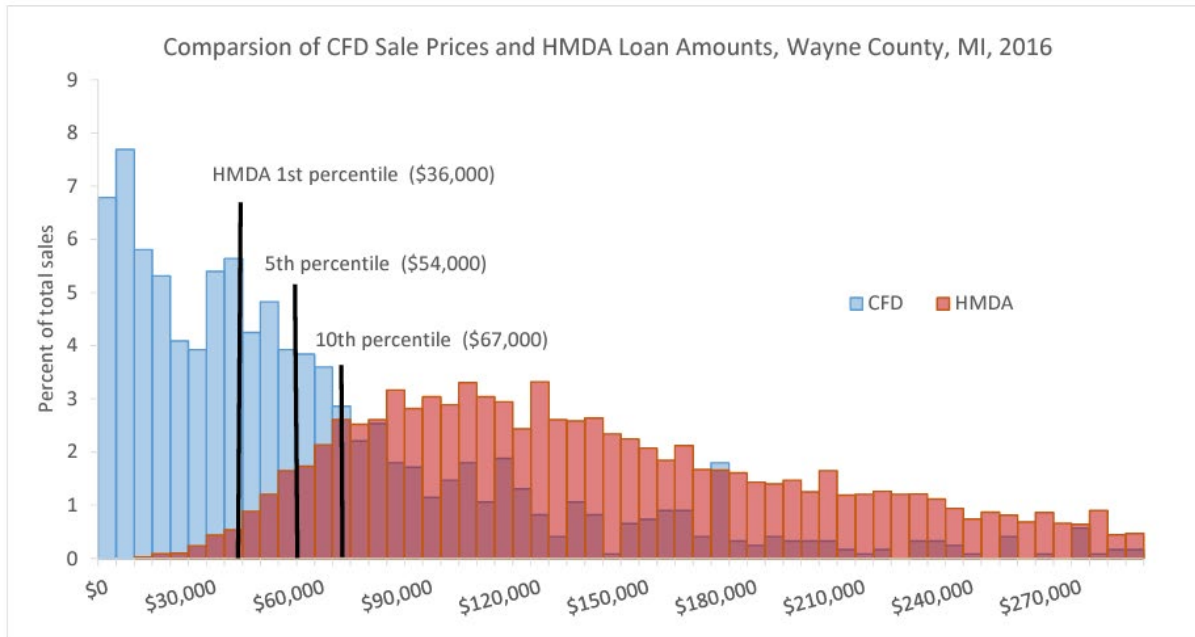

<sup>79</sup> See Atlanta Fed Report, *supra* note 50, at 13.

<sup>80</sup> *Id.*

<sup>81</sup> Alanna McCargo, Bing Bai, Taz George, & Sarah Stochak, *Small-Dollar Mortgages for Single-Family Residential Properties*, Urban Institute, 1 (April 2018), [https://www.urban.org/sites/default/files/publication/98261/small\\_dollar\\_mortgages\\_for\\_single\\_family\\_residential\\_properties\\_2.pdf](https://www.urban.org/sites/default/files/publication/98261/small_dollar_mortgages_for_single_family_residential_properties_2.pdf).

that those homes are more likely to have been purchased with alternative financing due to the lack of traditional credit options for smaller dollar loans.<sup>82</sup>

**FIGURE 3:** COMPARISON OF CFD SALE PRICES AND HMDA LOAN AMOUNTS, WAYNE COUNTY, MI, 2016

The market impact of targeting communities with contracts for deed may be worsened by the purchasing power some investors have, allowing them to acquire relatively low-cost housing stock in bulk and thereby control housing options for lower-income borrowers.<sup>83</sup> Once contracts for deed take root in a community, they can harm the housing market as a whole by contributing to below standard homes, inflated home prices, and less access to mainstream mortgage credit.

The use of contracts for deed can create and perpetuate substandard housing stock because, as noted above, sellers are able to generate profit even without maintaining the property by repeatedly selling the property to maximize profits.<sup>84</sup> Borrowers are motivated to improve their

<sup>82</sup> See Carpenter, *et al.*, *supra* note 72, at 13-14 (analyzing data on loan amounts of \$53,000 or less).

<sup>83</sup> See Purcell, *supra* note 41, at 1776-1777 (“land contracts give these investors the freedom to structure deals to their advantage and allow them to sell to people who may be eager to own a home, but are unable to get a bank-financed mortgage.”).

<sup>84</sup> See generally Battle, *et al.*, *supra* note 11, at 8 (“Land installment contract transactions are structured to fail. Sellers profit by churning a house through one land contract buyer after another. Sellers take whatever down payment the would-be owner can afford, pull in their payments and sweat equity for as long as possible, and then evict them and cycle another buyer into the property.”).

properties but may not have the financial resources to do so because they do not have access to traditional financing such as home equity loans. This is because borrowers do not attain legal title to the properties nor build equity in the properties when they enter into contracts for deed, unlike with mainstream mortgages.<sup>85</sup>

Repeatedly selling properties at inflated prices also drives up housing prices across the market overall.<sup>86</sup> One observer noted that “[m]any of the homes sold through land contracts come with huge mark-ups built into the price. It is not uncommon to see an investor purchase a home at auction for \$5,000 and sell it days later on land contract (with no repairs) for \$30,000.”<sup>87</sup>

Properties sold via contracts for deed may also be unmarketable. This could be due to title defects discussed above. In addition, properties being flipped by contract for deed sellers are not available to be purchased via mainstream mortgage financing, further distorting housing and credit markets.

---

<sup>85</sup> *Id.* at 3 (investors “reap substantial profits, at the expense of would-be homeowners who, because of the structure of the transaction, build no equity in the property, despite their payments.”).

<sup>86</sup> *See id.* at 8 (“[t]he purchase price in a land contract often, although not always, greatly exceeds the fair market value of the home.”).

<sup>87</sup> *See e.g.*, Battle, *et al.*, *supra* note 11, at 3.

## 6. Conclusion

The set-up-to-fail nature of many contracts for deed harms borrowers and communities. Sellers, who may profit from repeated flipping of the property, may not disclose all of the costs of the transaction, assess the borrower's ability to repay, or offer any loss mitigation options for borrowers who are unable to make timely payments.

Enforcement of existing legal protections can play a role in addressing many of the most harmful practices. As previously mentioned, several federal laws under the CFPB's jurisdiction provide consumer protections that address harms that often result from predatory contract for deed lending. Several of these legal provisions allow borrowers to bring private lawsuits, and state attorneys general also have authority to enforce these laws as well as relevant state and local laws. The CFPB will continue to utilize its authorities to address contract for deed loans that may set up borrowers to fail. The CFPB will also carefully review any whistleblower leads and relevant consumer complaints to continue to study and evaluate contracts for deed.

## APPENDIX A: THE HISTORY OF PREDATORY CONTRACTS FOR DEED

From the 1930s through the 1960s, Black borrowers in the United States were largely excluded from the conventional home-mortgage market due to discrimination. Maps produced by the government drew red lines around any neighborhood that was not majority white.<sup>88</sup> While discrimination against Black borrowers was common, the practice of redlining was institutionalized by the HOLC.<sup>89</sup> Established in 1933 during the Great Depression to assist distressed homeowners, the HOLC developed a grading system to assess neighborhood risk across the United States.<sup>90</sup>

The HOLC's grading system was based upon information obtained in a City Survey Program which distributed surveys to real estate professionals and lenders that included explicit questions regarding racial composition of neighborhoods.<sup>91</sup> HOLC then established four color-coded categories of quality that eventually became "residential security" maps that reflected the various grades.<sup>92</sup> The maps subdivided metropolitan areas into sections ranked from A (green) through D (red), based on factors that included the age of buildings, their condition, and the amenities and infrastructure in the neighborhood. Most important in determining a neighborhood's risk classification was the level of racial, ethnic, and economic homogeneity: the absence or presence of "a lower grade population."<sup>93</sup>

Detroit serves as an example of the historical lending discrimination experienced by Black borrowers.<sup>94</sup> Every Detroit neighborhood with a Black population was rated "D," or "hazardous" by federal appraisers, and colored red on the HOLC Security Maps.<sup>95</sup> Areas where there was "shifting" or "infiltration" of "an undesirable population" were given "D" ratings.<sup>96</sup> While the HOLC had a mixed record of lending in "C" and "D" neighborhoods, perhaps its greatest impact

<sup>95</sup> *Id.*

<sup>96</sup> *Id.*

was placing the federal government’s seal of approval on the linkage between real estate value and race and its influence on the FHA.<sup>97</sup>

In 1934, Congress created the FHA, which insured private mortgages, causing a drop in interest rates and a decline in the size of the down payment required to purchase a house.<sup>98</sup> Building on the HOLC’s rating system, the FHA developed its own guidance on race and real estate values. For example, the FHA Underwriting Manual warned of the dangers of “infiltration of inharmonious racial groups and nationality groups.” To prevent such “infiltration,” the manual recommended restrictive covenants as a method to maintain neighborhood stability via racial segregation.<sup>99</sup>

Driven by these federal housing policies, private lenders regularly refused loans to homebuilders in Black neighborhoods while underwriting the construction of homes by whites of a similar economic status a few blocks away.<sup>100</sup> Thus, while new federal policies placed homeownership within reach for many white working families, the FHA and other federal housing policy officially promoted real estate sales and bank lending practices that discriminated against prospective Black borrowers.<sup>101</sup>

Given the lack of access to traditional forms of credit, Black borrowers were often left with contracts for deed as the only alternative to finance a home purchase. Typically, speculators offered contracts for deed to Black borrowers that included high down payments and sometimes high interest rates. One study found that borrowers in contract for deed sales paid an average of 84% more than the speculator’s purchase price on the home and that “between 75 percent and 95 percent of the homes sold to black families [in Chicago] during the 1950s and 60s were sold on contract.”<sup>102</sup> The combination of high housing prices and above-market interest rates meant that contract holders had to make large monthly payments to meet their debt obligations. If they defaulted, speculators evicted them and quickly offered the house to another Black borrower. The arrangement brought speculators a profit with relatively little risk.<sup>103</sup> A secondary market for installment contract paper provided liquidity to the market and provided sellers with capital

to sustain the practice. Speculators and investors could recoup their entire investment within just two years.<sup>104</sup>

Black newspapers often included property advertisements that listed low down payments but not total sales price – a clear indicator that the property was being sold on contract and targeted to Black potential borrowers.<sup>105</sup> Since contracts for deed did not require appraisals or inspections, sellers sometimes sold dilapidated yet high-priced homes to Black borrowers. The absence of loss mitigation or workout options meant that when borrowers fell behind on their payments, they were evicted without foreclosure proceedings, losing all equity in their homes.<sup>106</sup> Even if borrowers successfully made payments over the full term of their contracts, they could lose everything at the end of the term due to balloon payments that borrowers could not finance.<sup>107</sup>

**The story of the James family in Chicago provides an example of the predatory practices associated with certain contracts for deed.<sup>108</sup>**

<sup>108</sup> Satter, *supra* note 42. The following is a condensed version of an account provided in Satter.

**In August 1955, the James family purchased a home on contract in Chicago for \$13,500 from Charles Peters, a real estate speculator who had purchased the home just 13 days earlier for \$8,000. The James' contract required a down payment of \$1,000 and monthly payments of \$105 over a 3-year term, with a final balloon payment of \$10,500 which Peters said he would help them to finance. Peters explained he was offering them the deal because they might have troubles "because [they were] colored."**

**After one year, Peters sold the contract at a discount to Arthur Krooth, a liquor store owner. When the end of the contract neared, the James family sought Peters' promised assistance to finance the balloon payment. Peters responded he could care less what happened to them because he no longer owned the home. The James family tried to secure a mortgage to finance the balloon payment, but their applications were denied by six banks because the property was not worth the \$10,500 needed for the balloon payment. Thereafter, the James family was evicted and lost all the money they had spent on their home, including improvements made to it during the term of the contract.**

The James family was not alone in their struggle to attain homeownership in Chicago. As in other cities, housing discrimination was common. White neighborhoods formed block associations to ensure segregation. They urged other whites not to sell to Blacks and pressured Blacks who did manage to buy to sell their properties back to whites. Some white residents resorted to violence, including bombings, to keep their neighborhoods segregated.<sup>109</sup> Blockbusting was also common—where speculators convinced whites to sell their homes out of fear the neighborhood was becoming desegregated, and then profited by selling those properties to Black buyers.<sup>110</sup>

In the segregated neighborhoods of Chicago, contracts for deed became a common form of financing for Black borrowers. One estimate found that 85 % of the homes sold to Black borrowers in neighborhoods experiencing "white flight" utilized contracts for deed to buy the

<sup>109</sup> Coates, *supra* note 32. ("On July 1 and 2 of 1946, a mob of thousands assembled in Chicago's Park Manor neighborhood, hoping to eject a black doctor who'd recently moved in. The mob pelted the house with rocks and set the garage on fire. The doctor moved away.")

<sup>110</sup> Blockbusting is a form of housing discrimination that was outlawed by the Fair Housing Act of 1968 that encourages homeowners to sell their property based on fears of an influx of non-white residents. 42 U.S.C. § 3604(e) (2018); *see, e.g.*, Satter, *supra* note 42.

same homes that fleeing white families had purchased with mainstream mortgages.<sup>111</sup> Likewise, a study conducted by the Chicago Commission on Human Relations of one square block of the city found that between 1953 and 1961, a total 29 parcels changed ownership. Of the 29 properties, 24 were purchased with contracts for deed. The study found that “[m]any of the interviewed contract purchasers conveyed the impression that the installment contract was the only means by which Negro families in Chicago could acquire property.”<sup>112</sup>

Despite the oppressive financial terms of the contracts for deed, Black borrowers fought back against the predatory practices. A group of Black homebuyers who purchased homes using contracts for deed in Chicago formed the Contract Buyers League. The League’s goal was “to stop exploitative contract sales, renegotiate their existing contracts, and open new lines of credit to black home borrowers.”<sup>113</sup> Although redlining was legally outlawed in 1968 by the Fair Housing Act, the practice persists.<sup>114</sup>
